

LEENA MARKIET

As a service designer with a strong UX/UI skillset and diverse project experience, I thrive on collaboration with people from different backgrounds and roles. I approach every project with curiosity, empathy, and a co-creation mindset. My design philosophy centers on simplicity and intuitiveness — creating user experiences that remain clear and accessible, even within highly technical systems.

Senior UX/UI Designer Space42 (previously Bayanat) | 08.2024-

I lead experience strategy and product design for complex, data-driven platforms across government and enterprise projects. My work spans the full product design process, from understanding the problem and shaping requirements to defining the experience, designing and prototyping solutions, and working with stakeholders and development teams through delivery. Much of my work focuses on making technically complex products easier for people to understand and use, including platforms that bring together real-time data, analytics, digital twins, monitoring, and AI-driven insights. I work across product strategy, user journeys, UX architecture, interaction design, and design systems, balancing user needs with business goals and technical realities.

AI has also become an active part of my design process. I use Claude and other AI-assisted workflows to explore ideas, prototype faster, and move from design concepts toward working product experiences. I'm particularly interested in designing not only for human users, but for a way of working where people and AI build products together. This includes creating scalable design systems, patterns, and structures that both team members and AI-assisted development workflows can use to build new product experiences consistently.

Service designer Wio bank (freelance project) | 02.2024- 02.2024

I was working in customer service knowledge base project, where the goal was to move existing content to a new platform. I worked with operations team restructuring the content and topics to better meet the needs of the agents and thus improve information discoverability and customer service speed.

Service designer Fortum (customer solutions) | 03.2023 – 10.2023

I was part of the Nordic UX and Concepts team, working to enhance customers' digital channels and improve their service experience. I contributed to various in-house projects, particularly those related to customer service, CX, loyalty program and the development of B2C and B2B services in the electricity and digital solutions domain in close collaboration with business developers. I employed diverse methods to gather customer insights, such as designing surveys using the Forsta platform, conducting interviews & analysing results, mapping digital customer journeys, and performing e.g. UX and card sorting tests. I was utilizing data to support my work; to find areas for improvement, to understand customer behavior through data, and to support decision-making (GA4, PowerBI, Forsta).

Educational designer & service designer Association of rural culture and education (MSL) | 01.2020 – 03.2023

MSL is a consultancy organization for non-profits specializing in educational design, participatory strategy processes, and organizational development. I played a key role in expanding our services, growing our customer base, and transitioning from educational design to organizational service design projects. In my role, I assisted client organizations in gathering member insights through interviews, surveys, and workshops. I analyzed qualitative and quantitative data, creating customer personas/segments based on my findings. I addressed challenges related to communication, marketing, and internal processes to foster a customer-centric approach. I actively contributed to the organization's website renewal and acquisition process for a study register system. Facilitating weekly events and meetings was also part of my responsibilities. I utilized tools like Canva to create visual materials and developed learning content for clients using Moodle (LMS).

M.Sc in Service Design Laurea University of Applied Sciences, Finland | 9.2018-12.2020

Service design is an interdisciplinary approach that combines design thinking, customer research, and business strategy to create services that are customer-focused and aligned with organizational goals.

Member service planner Finnish Central Union of Agricultural Producers and Forest Owners | 10.2017–07.2018

My daily focus was to understand the organization's functions from the perspective of its members and provide added value to each member. This involved implementing new communication initiatives and pilots, such as Facebook live shows, generating ideas for video content, and launching a podcast. I also worked on enhancing member services, particularly legal counseling. Additionally, I served as a secretary for the member services board, facilitating communication between the organization and its members. I actively participated in the website renewal process.

Specialist (agronomist) Finnish Regional Union of Agricultural Producers and Forest Owners | 09.2014– 10.2017

My job responsibilities encompassed various annual tasks within a small non-profit organization. In this role, I successfully secured EU project funding (100k), specifically aimed at supporting development activities for young farmers. As part of this project, I organized events such as the "Startup Weekend Helsinki Food," networking excursions, and entrepreneurship trainings.

Project planner The Finnish Organic Food Association Pro Luomu | 01.2013 – 06.2014

I also have prior work experience as a project worker, coordinator and research assistant & working in various customer service roles

M.Sc in Agroecology University of Helsinki, Finland | 09.2007 – 12.2012

Agroecology is a holistic farming approach that integrates economic, ecological, societal, political, and cultural factors to promote sustainable plant production and preserve natural resources in food systems and agriculture.
